* Shelf temperature deviations shall not exceed the specification relative to the mean of the highest and lowest temperature readings.

† The specified Maximum Sublimation Rate at 40 °C, 100 mTorr using a 0.001" thickness plastic lined trays.

§ Vacuum specifications are based on SP Scientific test data from similar units equipped with a two-stage rotary vane vacuum pump. Units equipped with other vacuum pumps may yield different results (e.g., a dry pump shall yield a Lowest System Vacuum of ≤ 50 mTorr).

¶ Cooling water temperatures should not exceed 24 °C.

‡ Noise from the equipment under normal operating conditions shall not exceed 85 dBA when measured at any point 3 feet (91 cm) away from the equipment. Lyophilizers equipped with ControLyo® shall exceed the specified noise level rating for approximately 3 to 5 seconds during depressurization. SP Scientific recommends the use of both hearing and eye protection during the ControLyo® process.
